EVERPURE EXPANDS TOTAL WATER MANAGEMENT

ATLANTA (Oct. 11, 2007)– Drawing on over 75 years of expertise in water treatment, Everpure has developed a new line of commercial water softeners suitable for a wide range of needs. Hard water can be detrimental to an operation because it can cause a hard chalky buildup, called limescale. This reduces the efficiency of water-using equipment, and can create the need for maintenance of equipment. Everpure’s new line of softeners has been developed to effectively handle each of these problems. Water softeners use an ion exchange process where calcium, magnesium, and other harmful elements are exchanged with sodium ions resulting in “soft” water. Many operations can benefit from using softened water from coffee houses and convenience stores to grocers and large retail outlets.

The addition of a comprehensive softening line is the most recent enhancement to Everpure’s Total Water Management. This program is designed for operators seeking the complete solution for all their water needs. In order to ensure the most efficient solution, Everpure begins its personalized process with a needs analysis that includes a site survey, water analysis, and business review. After the customer requirements are understood, Everpure works with the client to develop water standards to ensure consistency throughout the business. Their professionals install a turnkey system, designed specifically for each customer, and backed by the company’s broad service network.

Everpure, a leading foodservice industry supplier, has been manufacturing commercial water treatment products, solutions, and services worldwide since 1933. More restaurants depend on Everpure for their water treatment need than any other brand. Everpure is also a trusted provider of water treatment products to the vending, RV, marine, and aviation markets, and has helped many industry leaders improve their water treatment. Everpure is a part of the Water Technologies Group of Pentair, Inc. (NYSE: PNR). For more information on Everpure, visit the company’s website at www.everpure.com and www.pentair.com
